Art Unit: 3637

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 3 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The disclosure only enables the block being cylinder, not rectangle.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The language of the claim "I claim a Hollow..." is improper. The claimed language needs to be set forth by itself, not with "I claim".

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/669,408 Page 3

Art Unit: 3637

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1, 3-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Kadosh (6477814).

Kadosh (figure 4 shows a hollow block having four slots in its shell, the lengths of the slots being of half the height of the block, the blocks being rectangular, the slots being slightly wider than the thickness of the shell of the block,

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kadosh (6477814) in view of Fort (2653450) or Wie (834950).

Kadosh shows all the claimed limitations except for the block being cylindrical.

Fort or Wie both shows a block being cylindrical.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Kadosh's block to show the block being cylindrical as taught by Fort or Wie because cylindrical blocks would form would structural walls as taught by Fort and Wie.

9. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kadosh (6477814) in view of Fort (2653450) or Wie (834950) as applied to claim 1 above and further in view of Schaaf et al (5513475)

Kadosh as modified shows all the claimed limitations except for the block having four semicircular cuts on the upper and lower open faces of the block.

Schaaf et al shows semicircular cuts on the outer surfaces of the blocks to enable reinforcing elements to locate between mating surfaces of blocks.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Kadosh's modified block to show the block having four semicircular cuts on the upper and lower open faces of the block because having semi-circular cuts on the mating surfaces between block would enable the attachment of reinforcing elements between the mating structures of the blocks as taught by Schaaf et al.

10. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kadosh (6477814) in view of Fort (2653450) or Wie (834950).

Kadosh as modified shows all the claimed limitations except for the block having two holes in the shell of the block at its mid height.

Fort further shows the block having two holes (31) in the shell of the block at the mid height.

It would have been obvious to one having ordinary skill in the art at the time of the invention to modify Kadosh's modified block to show the block having the block having two holes in the shell of the block at its mid height as taught by Fort because it would allow for the filling material to exude therefrom to form a more solid wall if desired as taught by Fort.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art shows different hollow block designs.
